Discover Earth is a phrase commonly used to describe the act of learning about and exploring the various aspects of our planet, including its diverse ecosystems, natural landmarks, and the impact of human activity on the environment. It can refer to activities such as traveling to different locations, studying scientific research about the Earth, or engaging in environmental conservation efforts. The goal of discovering Earth is to gain a deeper understanding and appreciation for the world we live in and to promote sustainability and protection of our planet for future generations. When was Earth discovered by humans? It is not possible to pinpoint an exact date when Earth was discovered by humans, as early humans have always been living on the planet. However, in terms of scientific exploration and understanding, the Earth was officially discovered as a spherical planet in space in the 16th century, thanks to the research and observations by famous scientists such as Nicolaus Copernicus and Galileo Galilei.
